

Environmental Sustainability Policy

Venture Simulations Ltd

April 1st 2021

Policy Overview

As a provider of digital learning solutions, Venture Simulations Ltd (VSL) is committed to applying the principles of sound energy management and environmental sustainability. VSL also promotes the efficient use and treatment of waste as well as the appropriate use of transport by colleagues and contractors. All employees and key contractors work from home, thus minimising the travel to work carbon footprint.

Applying the Policy

VSL does not have a single office. Instead, all employees and contractors work from home or a personal office unit.

Wherever possible, all employees and contractors are required to manage waste appropriately so that it is recycled or disposed of in the most efficient and correct manner.

No water, nor toxic material is used in the production of VSL services. Wherever possible non-toxic biodegradable materials are sent for recycling via local government waste services and/or composted.

All employees and contractors are encouraged to use public transport (trains and buses) wherever possible. To reduce carbon emissions, all employees and contractors are encouraged to use appropriate internet services to communicate with clients and suppliers. To minimise its carbon footprint, VSL has given all employees access to Microsoft Teams so that product demonstrations can be provided electronically, rather than a member of the team travelling to another location.

Wherever possible, employees and contractors are encouraged to use raw materials from sustainable and renewable sources.

This policy is reviewed periodically and made available to all colleagues.

For further information, please read our Terms and Conditions that are published on the SimVenture website
